# TRADEMARK’S “SHIP OF THESEUS” PROBLEM

MATTHEW T. BODIE\*

## INTRODUCTION

The “Ship of Theseus” is a classic philosophical problem posed about the continuity of identity. In Plutarch’s telling, the ancient Athenians preserved for posterity the famous ship piloted by Theseus after the slaying of the Minotaur.<sup>1</sup> Once a year, a delegation would travel on the ship to the island of Delos with a tribute to the god Apollo.<sup>2</sup> Over time, the wood began to rot, and the decaying planks were replaced with new ones. The ship became “a standing example among the philosophers, for the logical question of things that grow: one side holding that the ship remained the same, and the other contending that it was not the same.”<sup>3</sup> The conundrum was recently referenced in the Marvel Comics Universe, as two versions of the organic android Vision puzzled over their identities in the climax of *WandaVision*.<sup>4</sup> A wrinkle was added: what if the boards from the original ship were saved and used to recreate a version of the ship? Would that also be the ship of Theseus?

Trademark has long had a problem with identity. The purpose of trademark is to identify the source of goods or services and thereby make life easier for consumers. But trademark does not make an effort to ensure that the company that holds the mark still reflects the entity that developed the mark’s identity. Rather, trademark has turned largely into an alienable

property right, unmoored from its created context.<sup>5</sup> The law has severed the connection between the mark and the entity beyond the formalities of organization law, with the result that whoever controls the mark's owner controls the mark. As a result, new owners can take advantage of reputation capital they never earned, and those with a true connection to the success of the original business can be shut out.<sup>6</sup>

This Essay argues against the law's presumption that the corporate entity should have exclusive control over the mark, no matter the continuing connection (or lack thereof) that the entity has with the original business and goodwill. Trademark should instead reflect the potential that the identity will change over time, changing the meaning of the trademark along with it. Rather than blindly empowering individual corporations, trademark law should either pay closer attention to identity issues or allow a wider variety of participants to use the mark in various ways. Either of these approaches to trademark would be messier but would reflect more accurately our complicated reality.

## I. THE PURPOSE OF TRADEMARK

A trademark is a designation—a word, a shape, or other symbolic identifier—of the source of a particular good or service. The Lanham Act defines a trademark to include “any word, name, symbol, or device . . . [used by individuals, firms, governmental entities, or corporations] to identify and distinguish [their] goods, including a unique product, from those manufactured or sold by others and to indicate the source of the goods . . . .”<sup>7</sup> Similarly, the Act defines service marks as such words, names, or symbols that “identify and distinguish the services of one person, including a unique service, from the services of others and to indicate the source of the services . . . .”<sup>8</sup> The idea of trademark comes from the literal “marks” that were made on goods in order to identify their maker.<sup>9</sup> Trademark protection was

5. Mark A. Lemley, *The Modern Lanham Act and the Death of Common Sense*, 108 YALE L.J. 1687, 1687–88 (1999) (“Commentators and even courts increasingly talk about trademarks as property rights; as things valuable in and of themselves, rather than for the product goodwill they embody.”).

6. This approach is jarring, given trademark's concern with the impropriety of taking another's goodwill as one's own. Robert G. Bone, *Hunting Goodwill: A History of the Concept of Goodwill in Trademark Law*, 86 B.U. L. REV. 547, 550 (2006) (“The logic of the misappropriation argument is deceptively simple: a defendant who attracts consumers by using the plaintiff's mark improperly benefits from plaintiff's goodwill.”).

7. 15 U.S.C. § 1127.

8. *Id.* Although trademarks and service marks have separate definitions under the Act, the literature generally lumps service marks in with trademarks. ROBERT P. MERGES, PETER S. MENELL & MARK A. LEMLEY, *INTELLECTUAL PROPERTY IN THE NEW TECHNOLOGICAL AGE* 741 (5th ed. 2010) (“In general, service marks are subject to the same rules as trademarks . . . .”).

9. MERGES, MENELL & LEMLEY, *supra* note 8, at 733. Examples of such marks have been found dating back 4,000 years and across ancient cultures in China, India, Persia, Egypt, Rome, and Greece.

originally limited to names or symbols that represented the source of the good, but now they extend to logos, slogans, phrases, and trade dress.<sup>10</sup> But the core idea remains one of name or ongoing referent. Like names of people or places, trademarks are meant to identify a specific entity and provide a fixed reference or “rigid designator” for that entity.<sup>11</sup>

In explaining why trademarks exist, courts and an influential set of commentators have coalesced around the “consumer search costs” theory.<sup>12</sup> The idea behind the theory—known as the law and economics or the Chicago School approach<sup>13</sup>—is that trademark reduces consumer information costs by enabling them to identify the source of a particular good or service quickly and easily.<sup>14</sup> As one influential jurist put it: “The fundamental purpose of a trademark is to reduce consumer search costs by providing a concise and unequivocal identifier of the particular source of particular goods.”<sup>15</sup> The crux of the theory is that the source of a particular good or service is an important piece of the informational mosaic that goes into a consumer purchase. Using a name, logo, symbol, or trade dress to establish the source is much simpler than having to determine the source in the absence of such a marker. The continuity of the source is critical to the connection. As William Landes and Richard Posner have described it: “A trademark conveys information that allows the consumer to say to himself, ‘I need not investigate the attributes of the brand I am about to purchase because the trademark is a shorthand way of telling me that the attributes are the same as that of the brand I enjoyed earlier.’”<sup>16</sup> Of course, for trademarks to be useful, the source of the goods or services does, in fact, have to provide critical

information about the quality of the goods or services themselves.<sup>17</sup> These positive associations can be categorized as firm reputation or goodwill.

Trademark promotes the development of goodwill through the prevention of misappropriation.<sup>18</sup> In straightforward instances of trademark infringement, one company uses the name, symbol, logo, or trade dress of another firm to pretend that the goods or services come from that source, such as a knockoff company putting the Disney name on its own products.<sup>19</sup> Much of trademark litigation and scholarship has settled into debates about the scope of trademark rights: whether and to what extent the holder of a certain trademark should be able to prevent others from using the particular mark, and under what circumstances. Trademark plaintiffs endeavor to prove, through consumer surveys focused on brand awareness, that another's use of or reference to their mark will create a likelihood of confusion.<sup>20</sup> The larger the space that the brand occupies, the more territory the company can claim for its exclusive use. The expansion of licensing and claims against dilution have worried many in the field that trademark is becoming too powerful. Big companies often bully smaller ones into abandoning their names and brands that come within a whiff of the larger company's mark, even if these claims are specious.<sup>21</sup> As the need for protectable brand identities grows apace, there is a real fear that we may run out of unclaimed marks for use.<sup>22</sup>

There is another problem, however, lurking in the background of the law of trademark. If trademark endeavors to identify a particular source for goods or services—to provide a proper name for that source—then what exactly is the source? If trademark serves as a rigid designator of a particular object, then what is the nature of the object?<sup>23</sup> When we refer to proper

17. *Id.* at 168 (“The value of a trademark to the firm . . . is the saving in consumers’ search costs made possible by the information that the trademark conveys or embodies about the quality of the firm’s brand.”).

18. Bone, *supra* note 6, at 549 (“It is customary to refer to trademark law as protecting a seller’s goodwill in its mark.”).

REV. 945, 951 (2018) (finding that the supply of available trademarks “is already severely depleted” and the registered marks “are growing increasingly congested”).

23. Heymann, *supra* note 11, at 253 (citing SAUL A. KRIPKE, NAMING AND NECESSITY (1980)).

names for people or places, we have fixed physical manifestations that represent an individual person or geographical location. But trademark refers to something much less identifiable, much less certain. In order to make its doctrine work, trademark law has made a series of methodological compromises—compromises that are coming under increasing strain.

## II. TRADEMARK'S BLINKERED VIEW OF IDENTITY

Trademarks are often lumped in with copyrights and patents as the triumvirate of “intellectual property.”<sup>24</sup> But trademark is different. The other types of intellectual property concern discrete ideas, inventions, works of art, or useful information—specific and identifiable creations in and of themselves.<sup>25</sup> A trademark, however, refers to an organizational entity; it applies to the identity of the producer (or licensor) rather than the produced.<sup>26</sup> The Walt Disney Company has copyrights over its films, television shows, and cartoons, but it has a trademark as to its name.<sup>27</sup>

But what is the Walt Disney Company? Is it the people who work under that name? The inheritors of Walt Disney's vision? Is it the collection of actions that take place under that aegis? Is it the property rights—intellectual and otherwise—that are held by the company? Trademark law has answered this question decisively—it is simply the corporation. Ongoing debates about the “soul” of Disney and its rightful heirs are meaningless in this context.<sup>28</sup> The Walt Disney Company holds the trademark for its name and “Disney” more generally, and whoever controls the corporate entity controls the mark.

It makes some sense to simply allow the legal entity—whether it be a corporation, LLC, partnership, or even sole proprietorship—to control the legal rights to the trademark. It solves all the messy problems that might

---

24. MERGES, MENELL & LEMLEY, *supra* note 8, at 24.

25. LANDES & POSNER, *supra* note 16, at 166 (arguing that trademark is “a distinct form of intellectual property from patents and copyrights” and “has a more secure efficiency rationale than the legal protection of inventive and expressive works”); 1 J. THOMAS MCCARTHY, MCCARTHY ON TRADEMARKS AND UNFAIR COMPETITION § 6:3 (5th ed. 2021) (“Unlike a patent or copyright, a trademark does not exist ‘in gross’ or by itself, apart from the goodwill it represents.”).

26. Trademarks may also refer to the thing that is produced, although the name generally refers back to the company that makes it. See Jennifer E. Rothman, *Initial Interest Confusion: Standing at the Crossroads of Trademark Law*, 27 CARDOZO L. REV. 105, 124–25 (2005) (“Trademarks historically served to identify the manufacturer or sponsor of a good or provider of a service. Today, trademarks primarily identify goods and services and distinguish them from those sold and provided by others, without regard to who actually manufactures them.”).

27. Interestingly, Disney has trademarked Mickey Mouse as part of its brand and has endeavored to weave the “Steamboat Willie” cartoon featuring Mickey Mouse into its trademark protections. Sarah Sue Landau, Note, *Of Mouse and Men: Will Mickey Mouse Live Forever?*, 9 N.Y.U. J. INTEL. PROP. & ENT. L. 249, 266–67 (2020).

28. During 2003–2004, board members, employees, and shareholders led a “Save Disney” campaign seeking to oust CEO Michael Eisner for his purported failure to maintain Disney's historical ethos. JAMES B. STEWART, *DISNEYWAR* 466–514 (paperback ed. 2006).

occur if we try to delve more deeply into what, exactly, the trademark is protecting. We simply assign a “person” to be the holder of the trademark and assume that the legal person represents the underlying activity that the trademark is designed to protect.

But it is not that simple. Trademarks are not supposed to protect corporate entities—they are meant to designate ongoing businesses. They connect a particular good or service with a producer of that good or service so as to identify them. As Landes and Posner described it, “a trademark is a word, symbol, or other signifier used to distinguish a good or service produced by one firm from the goods or services of other firms.”<sup>29</sup> Corporations are legal and fictional entities who merely indicate a set of legal relationships among the participants.<sup>30</sup> Trademarks are not meant to name the corporation; the company’s charter or articles of incorporation provides its name. Trademark is meant to designate an ongoing business or product generated by that business, as well as the goodwill generated by the business.<sup>31</sup> Economic firms, not corporations, are the real business entities that trademarks are meant to protect.

The economic literature on the theory of the firm has endeavored over time to develop a conception of what exactly firms represent and why we have them. Firms have perhaps best been described as the set of relationships between individuals for the purpose of carrying on a joint economic enterprise.<sup>32</sup> Armen Alchian and Harold Demsetz framed this as the need to coordinate production using a variety of inputs—the need for a system of “team production.”<sup>33</sup> They defined team production as “production in which 1) several types of resources are used and 2) the product is not a sum of separable outputs of each cooperating resource.”<sup>34</sup> Other approaches to the firm have emphasized the need for firm governance to avoid the costs of opportunism;<sup>35</sup> the need for a repository of property rights for assets used in joint production;<sup>36</sup> or the need to control access to valuable assets used in

29. LANDES & POSNER, *supra* note 16, at 166.

30. Grant M. Hayden & Matthew T. Bodie, *Shareholder Voting and the Symbolic Politics of Corporation as Contract*, 53 WAKE FOREST L. REV. 511, 532 (2018) (“[C]orporations are fictional legal entities without individual corporeal or spiritual existence.”).

31. *Cf.* Heymann, *supra* note 11, at 256 (“[O]ur task in trademark law is, first, to determine the baptismal moment when a lexical unit becomes the proper name of a product or service.”).

32. *See, e.g.*, Armen A. Alchian & Harold Demsetz, *Production, Information Costs, and Economic Organization*, 62 AM. ECON. REV. 777, 783 (1972).

33. *Id.* at 777–79.

34. *Id.* at 779.

35. *See* OLIVER E. WILLIAMSON, *THE ECONOMIC INSTITUTIONS OF CAPITALISM* 114–15 (1985); OLIVER E. WILLIAMSON, *THE MECHANISMS OF GOVERNANCE* 47–48 (1996).

36. *See, e.g.*, OLIVER HART, *FIRMS, CONTRACTS, AND FINANCIAL STRUCTURE* 23 (1995); Oliver Hart & John Moore, *Property Rights and the Nature of the Firm*, 98 J. POL. ECON. 1119, 1120 (1990); *see* D. Gordon Smith, *The Critical Resource Theory of Fiduciary Duty*, 55 VAND. L. REV. 1399, 1404–

production.<sup>37</sup> Within all of these concepts, the firm represents the relationships and economic activity that are housed within its (conceptual) borders.

Organizational law has taken the firm and given it a legal identity. By filling out a form and obtaining state certification, a group of people can form a corporation, LLC, or other business entity that assumes its own legal personhood.<sup>38</sup> Originally corporations had a designated purpose that could be enforced through the ultra vires doctrine.<sup>39</sup> For a long time now, however, business entities have been fungible creations with no specific purpose and no natural identity. They are simply instruments for creating a specific set of legal relationships.

The “corporatification” of the firm has disadvantaged employees by moving control and governance of the firm into the legal entity associated with the firm. This entity is generally a corporation controlled by shareholders that provides no governance rights to workers.<sup>40</sup> But workers are essential to the economic firm. In order to avoid the transaction costs of contracting, firms undertake to manage the production process internally through the use of employees.<sup>41</sup> When Ronald Coase considered “whether the concept of a firm which has been developed fits in with that existing in the real world,” he determined: “We can best approach the question of what constitutes a firm in practice by considering the legal relationship normally called that of ‘master and servant’ or ‘employer and employee.’”<sup>42</sup> Even though employees are critical to conceptions of the economic firm, they are on the outside of its legal instantiation.<sup>43</sup>

---

05 (2002) (“The central insight of the property rights theory of the firm is that an appropriate allocation of ownership rights over the assets of a firm reduces the likelihood that one party will unfairly take advantage of the other participants within the firm.”).

37. See Raghuram G. Rajan & Luigi Zingales, *Power in a Theory of the Firm*, 113 Q. J. ECON. 387, 390 (1998).

38. Partnerships can be formed even without filing papers if the underlying relationships resemble an economic firm. UNIF. P’SHIP ACT § 101(6) (NAT’L CONF. COMM’RS ON UNIF. STATE L. 1997); see, e.g., *Holmes v. Lerner*, 88 Cal. Rptr. 2d 130, 141–43 (Ct. App. 1999) (finding that a partnership was created informally, without a governing document, when parties agreed to build business together and share profits).

REV. 1279, 1302 (2001) (describing how the ultra vires doctrine limited “the corporation’s legal authority to certain powers enumerated in the corporate charter”).

40. In fact, the lodestar in corporate law is shareholder primacy: the corporation is charged to focus solely on maximizing the wealth of its shareholders.

41. R. H. Coase, *The Nature of the Firm*, 4 ECONOMICA 386, 387 (1937) (“If a workman moves from department Y to department X, he does not go because of a change in relative prices, but because he is ordered to do so.”).

42. *Id.* at 403.

43. Dalia Tsuk, *Corporations Without Labor: The Politics of Progressive Corporate Law*, 151 U. PA. L. REV. 1861, 1864 (2003) (“[I]n the course of the twentieth century, legal scholars and political

Unfortunately, trademark only exacerbates this separation of the workers from the firm. It hands ownership and control of the mark to the organizational entity rather than trying to divine who really represents the ongoing business.<sup>44</sup> What if the Board of Trustees for the University of Southern California decided the university no longer needed a law school? In our hypothetical, the Board fired all the employees—yes, including the tenured professors—and then sold off the Musick Law Building. If the Board hired all new faculty and staff and reopened tomorrow at a new location, using a completely new pedagogical approach to legal education, they could call their school “USC Gould School of Law.” But if all of the terminated faculty and staff bought the Musick Law Building and reopened the next day, with the exact same set of classes as prior to the closure, could they call themselves USC Gould School of Law? No.

If trademark law actually cared about the substance of the information behind a mark, it might not ignore such a dramatic change. But it seems not to care. When a business is sold, trademark ownership goes with it, even if the new owners bring a much different mindset or culture.<sup>45</sup> The old owners cannot continue to use the mark without specific contractual provisions and continuation in the same trade.<sup>46</sup> In one case, the court prohibited a longtime employee of a real-estate firm from using a modified version of the agency’s service mark depicting the Memphis skyline, even though the mark was no longer registered and the agency ceased to exist.<sup>47</sup> The court chided the former employee—somewhat ironically—by saying that “[p]roperty rights in service marks do not exist in isolation; they exist only as a right attached ‘to an established business or trade in connection with which the mark is employed.’”<sup>48</sup> The former owner kept her rights, despite the disappearance of the underlying business; the former employee had none.

---

theorists helped remove the interests of workers (as differentiated from shareholders, officers, and directors) from the core concerns of corporate law and theory.”).

44. Dan L. Burk & Brett H. McDonnell, *Trademarks and the Boundaries of the Firm*, 51 WM. & MARY L. REV. 345, 376 (2009) (“[T]rademark law may serve to partition the reputational investment of the firm from that of the rank and file employee.”).

45. *Yellowbook Inc. v. Brandeberry*, 708 F.3d 837, 844 (6th Cir. 2013) (“Ownership of trademarks impliedly passes with ownership of a business, without express language to the contrary.” (citing *Am. Dirigold Corp. v. Dirigold Metals Corp.*, 125 F.2d 446, 454 (6th Cir. 1942)); *Plitt Theatres, Inc. v. Am. Nat’l Bank & Trust Co. of Chi.*, 697 F. Supp. 1031, 1034–35 (N.D. Ill. 1998).

46. *Yellowbook*, 708 F.3d at 844 (“In order for the owner of a mark to retain the right to use the mark upon sale of the related business, 1) the intent to resume ‘producing substantially the same product or service’ must be manifest, 2) some portion of the prior goodwill must remain with the owner, and 3) operations must resume within a reasonable time.” (citing *Berni v. Int’l Gourmet Rests. of Am., Inc.*, 838 F.2d 642, 647 (2d Cir. 1988))).

47. *Taylor v. Thomas*, 624 F. App’x 322, 324 (6th Cir. 2015). The court found that the business had impliedly assigned the rights to the mark to the former owner. *Id.* at 326.

48. *Id.* at 326 (quoting *Yellowbook*, 708 F.3d at 844).

The law also protects marks owned by entities that are no longer really using them. If the holder discontinues its use of a mark with intent not to resume such use, or if a licensor fails to exercise quality control over the licensee, the trademark will be considered abandoned.<sup>49</sup> But in *Wells Fargo & Co. v. ABD Insurance & Financial Services*,<sup>50</sup> Wells Fargo acquired ABD and changed ABD's name to "Wells Fargo Insurance Services." Despite the name change, Wells Fargo still continued to display the ABD mark on presentations and solicitations and maintained ABD's prior website.<sup>51</sup> Former ABD employees created a new company called "Insurance Leadership Network" but used the company to launch a "new" ABD, acquiring the ABD mark after Wells Fargo failed to renew the registration.<sup>52</sup> Looking at the "totality of the circumstances" to determine intent to abandon, the court found that Wells Fargo did not intend to abandon the mark, despite its efforts to rebrand the business under its own name.<sup>53</sup>

Trademark's theoretical compromise—its fiction—is that the business entity represents the firm and its ongoing business. But the compromise often breaks down. When a well-known musical band breaks up, the holder of the trademark may continue to operate under the band's name and prohibit former members from using it.<sup>54</sup> Fans know that the band is no longer the "band" that it once was, but the mark lives on, controlled by the owner of the corporate entity regardless of what came before. Those who formerly worked under the name can only refer to the association, often limited in the style

49. 15 U.S.C. § 1127; see also MCCARTHY, *supra* note 20, at § 18:48.

50. *Wells Fargo & Co. v. ABD Ins. & Fin. Servs., Inc.*, 758 F.3d 1069 (9th Cir. 2014).

51. *Id.* at 1071.

52. *Id.*

53. *Id.* at 1072; see also ADT Sec. Servs., Inc. v. A/C Sec. Sys., Inc., 736 N.W.2d 737, 758 (Neb. Ct. App. 2007) ("[T]he merger of Old A/C Security into Cambridge did not, standing alone, result in Cambridge's abandoning the trade name 'A/C Security.'").

54. The band "Third Eye Blind" provides one example. Lead singer Stephan Jenkins retained control of the band's trademark and continued operating under the band's name. Two other original members—bassist Arion Salazar and guitarist Kevin Cadogan—formed a new band under the name "XEB" and once held a concert billed as "Original Members of Influential '90s Band Play Their 1997 Debut Album!" Rob Harvilla, "This Is as Much Our Story as Anybody Else's," RINGER (Apr. 6, 2017, 11:41 AM), <https://www.theringer.com/2017/4/6/16042244/third-eye-blind-20th-anniversary-semi-charmed-life-xeb-1f6cb7524abc> [<https://perma.cc/9TGS-TCUZ>]. Jenkins has issued multiple cease-and-desist letters to Salazar and Cadogan for the use of "Third Eye Blind" in their promotional materials, including their bios. After one such letter, promoter Eventbrite removed all references to Third Eye Blind from XEB's promotional materials. Roman Gokhman, *How's It Gonna Be? Founding Third Eye Blind Members Fight for Right to Acknowledge Contributions*, RIFF MAG. (Aug. 3, 2016, 10:58 AM), <http://riffmagazine.com/features/third-eye-blind-trademark> [<https://perma.cc/NZ8M-SX7L>]. As Cadogan has related: "What we'd like is to live and let live, ideally, and we'd like to stop being harassed by him . . . [t]aking the name for himself, taking all the shares of a corporation. Pieces of paper [were] created to cause problems, and there are pieces of paper that can be created to fix problems, I suppose. But certainly the damage is done there." *Id.*

and manner of that reference.<sup>55</sup> While this sort of effect is easiest to see when the members of the firm are limited in number, it applies any time a firm undergoes a significant change in composition.

When there is a division in organizational ownership, then trademark may take notice and endeavor to share the property rights. In *Hart v. Weinstein*, the common owners of a family business had divided up operations, and one party sought to claim the exclusive trademarks from the business.<sup>56</sup> The court held that “two persons cannot be owners of the whole of the same thing, but they can be owners in common of the same thing.”<sup>57</sup> Both sets of owners were allowed to use the trademarks. In *Givens Jewelers, Inc. v. Givens*, when two brothers split up an existing business by each taking one of the two jointly owned corporations through which they conducted the business, both had rights to the name.<sup>58</sup> When one company tried to enjoin the other from using the mark, the court held that both were entitled to use it, despite the formal separation.<sup>59</sup>

This equanimity with the possibility for confusion is reserved for situations where both parties have claims to the property right through ownership of the business entity. It does not extend to “mere” former participants in the firm, especially employees. Under those circumstances, courts have upheld the rights of the business entity that retained the title, even if only to let the rights molder. Importantly, no real attention is generally paid to whether the trademark accurately represents a continuation of the ongoing business. In order to reclaim the use of the mark, nonowners must prove abandonment—a high hurdle requiring evidence of both nonuse and intent not to reuse.<sup>60</sup>

Trademark law does make some effort to maintain a correlation between the mark and the underlying business. Under the Lanham Act, mark holders are not allowed to assign the mark “in gross”—without the

---

55. See, e.g., *Kassbaum v. Steppenwolf Prods., Inc.*, 236 F.3d 487, 493 (9th Cir. 2000) (noting that for a former member of the band Steppenwolf, phrasing like “formerly of Steppenwolf” had to be less prominent than other components of the promotional advertising to avoid confusion); *Brother Recs., Inc. v. Jardine*, 318 F.3d 900, 907 (9th Cir. 2003) (“First, the product or service in question must be one not readily identifiable without use of the trademark; second, only so much of the mark or marks may be used as is reasonably necessary to identify the product or service; and third, the user must do nothing that would, in conjunction with the mark, suggest sponsorship or endorsement by the trademark holder.” (quoting *New Kids on the Block v. News Am. Publ’g, Inc.*, 971 F.2d 302, 308 (9th Cir. 1992))).

56. *Hart v. Weinstein*, 737 So. 2d 72, 72–73 (La. Ct. App. 1999).

57. *Id.* at 74.

58. *Givens Jewelers, Inc. v. Givens*, 380 So. 2d 1227, 1231 (La. Ct. App. 1980).

59. *Id.* at 1231–32.

60. 15 U.S.C. § 1127 (“A mark shall be deemed to be ‘abandoned’ . . . [w]hen its use has been discontinued with intent not to resume such use.”).

underlying goodwill associated with the business.<sup>61</sup> The purpose of the doctrine is to prevent deception: “[u]se of the mark by the assignee in connection with a different goodwill and different product would result in a fraud on the purchasing public who reasonably assume that the mark signifies the same thing, whether used by one person or another.”<sup>62</sup> Similarly, the prohibition against naked licensing is designed to prevent the mark holder from selling off rights to use the mark with no regard for the licensee’s actual practices. In order to license the mark, the holder must ensure that “quality control of the goods and services . . . is maintained.”<sup>63</sup> The notion of quality control relates not to excellence but rather to the consistency and predictability of the goods and services traditionally provided.<sup>64</sup> The need to police quality also applies to certification marks, which can be canceled if the organization exercises insufficient control over its members to ensure consistency.<sup>65</sup>

The law’s efforts to monitor identity, however, are fairly limited. The doctrines as to assignment in gross and naked licensing apply to situations in which a business entity other than the original mark holder uses the mark, and so does not apply to situations in which the trademark’s corporate holder has not changed. Moreover, both doctrines have been sharply minimized,

---

61. *Id.* § 1060(a)(1) (“A registered mark or a mark for which an application to register has been filed shall be assignable with the good will of the business in which the mark is used, or with that part of the good will of the business connected with the use of and symbolized by the mark.”); *Clark & Freeman Corp. v. Heartland Co.*, 811 F. Supp. 137, 139 (S.D.N.Y. 1993) (citing *Marshak v. Green*, 746 F.2d 927, 929 (2d Cir. 1984)).

62. *Marshak*, 746 F.2d at 929 (2d Cir. 1984); *PepsiCo, Inc. v. Grapette Co.*, 416 F.2d 285, 289 (8th Cir. 1969); *see also* Lemley, *supra* note 5, at 1709 (“It is hard to see how the goals of preventing consumer confusion and encouraging investments in product quality would be furthered by allowing a company to sell the rights to a mark to another who will not make the same products. If anything, assignments in gross are vehicles for *adding to* consumer confusion, not reducing it.”). Creditors cannot levy the trademark of a bankrupt person unless it is sold along with the ongoing business. *See MCCARTHY*, *supra* note 20, at § 18:28; LANDES & POSNER, *supra* note 16, at 186.

63. *Moore Bus. Forms, Inc. v. Ryu*, 960 F.2d 486, 489 (5th Cir. 1992); *see also* § 1055 (“Where a registered mark or a mark sought to be registered is or may be used legitimately by related companies, such use shall inure to the benefit of the registrant or applicant for registration, and such use shall not affect the validity of such mark or of its registration, provided such mark is not used in such manner as to deceive the public.”).

64. *MCCARTHY*, *supra* note 20, at § 18:55; *see also* *Dawn Donut Co. v. Hart’s Food Stores, Inc.*, 267 F.2d 358, 366 (2d Cir. 1959) (“[T]he Lanham Act places an affirmative duty upon a licensor of a registered trademark to take reasonable measures to detect and prevent misleading uses of his mark by his licensees or suffer cancellation of his federal registration.”); Jake Linford, *Valuing Residual Goodwill After Trademark Forfeiture*, 93 NOTRE DAME L. REV. 811, 830 (2017) (“[I]f the assignee offers substantially the same product, the assignment will not forfeit the mark, even if the quality has changed somewhat.”).

65. 15 U.S.C. § 1064 (permitting cancellation of a certification mark “on the ground that the registrant (A) does not control, or is not able legitimately to exercise control over, the use of such mark, or . . . (D) discriminately refuses to certify or to continue to certify the goods or services of any person who maintains the standards or conditions which such mark certifies . . .”).

approaching insignificance.<sup>66</sup> It is well established that trademark holders are freely entitled to sell their mark and license it to others without significant responsibilities to monitor the use.<sup>67</sup> And this development is not a new one: the open disregard for the assignment-in-gross doctrine was noted in 1931.<sup>68</sup> Trademark has lost its moorings to the economic firm and its underlying ongoing business.<sup>69</sup>

### III. TRADEMARK AND GRADATIONS OF IDENTITY

The law's approach to trademark control and ownership has its advantages. By assigning rights to a particular legal entity, the law can easily identify who holds the mark and who can exercise the rights associated with it. There is no need for a fact-intensive and potentially subjective examination of whether the business that created the mark still exists as a substantive matter.<sup>70</sup> Any fights over who holds and can exercise the rights to the mark are shifted to the business entity, which has governance mechanisms to resolve such disputes.<sup>71</sup> Clarity of ownership is prioritized over more nuanced analysis.

But trademark's willful blindness towards the actual life of the ongoing business has increasing costs. The propertization of trademark allows companies to buy, sell, and license business identities without ensuring that the substance matches the label. The brand takes precedence over all else.<sup>72</sup>

66. Lemley, *supra* note 5, at 1710 (“[T]he trend in trademark law clearly seems to be toward permitting assignments in gross and ‘naked,’ or unsupervised, trademark licenses.”).

67. Irene Calboli, *Trademark Assignment “With Goodwill”: A Concept Whose Time Has Gone*, 57 FLA. L. REV. 771, 774 (2005) (“Regardless of this rule [against assignment in gross], however, trading in trademarks per se has always been a custom in the business world . . . . In the past decades, the development of the consumer society and the growing role of trademarks in the economy only have accelerated this trend.”).

68. Nathan Isaacs, *Traffic in Trade-Symbols*, 44 HARV. L. REV. 1210, 1210 (1931) (“The assignment of trade-marks and trade names is frowned upon by the law. They are not saleable in gross. Yet a lively and persistent traffic in them exists in the business world. This is accomplished in part through a widespread ignorance of the law, or through gentlemen’s agreements that do not rely on the law, or through deliberately making the most of the exceptions that the law recognizes.”).

69. Mark P. McKenna, *Trademark Use and the Problem of Source*, 2009 U. ILL. L. REV. 773, 822 (2009) (noting that “‘source’ in modern trademark law is an ‘extraordinarily broad concept capable of encompassing virtually any relationship between entities’”). On the flip side, trademark also allows companies to change their identities in order to escape from reputational damage. *See Note, Badwill*, 116 HARV. L. REV. 1845, 1845 (2003) (“Existing trademark law fails to account for consumer badwill. Instead, it provides producers with an escape hatch.”).

70. *Cf.* Rebecca Tushnet, *Registering Disagreement: Registration in Modern American Trademark Law*, 130 HARV. L. REV. 867, 876 (2017) (“Rather than having to establish in each individual legal proceeding that its mark is in fact valid, a registrant is accorded a presumption of validity, and under certain circumstances that presumption is irrebuttable.”).

71. For example, corporate law has a highly developed legal architecture surrounding who controls the corporation at any particular moment in time. *See* Hayden & Bodie, *supra* note 30, at 515–16.

72. Deven R. Desai, *From Trademarks to Brands*, 64 FLA. L. REV. 981, 983–84 (2012) (“Brands are regulated by trademark law, which fails to grasp that trademarks are merely a subset of brands and

Bigger and more capitalized companies have more power to enforce their exclusivity and keep out competitors that might have participated in the original business. When combined with legal tools such as covenants not to compete and trade secret law, the owners of a business can clamp down on workers and prevent them from using their talents in the same industry.<sup>73</sup> The primary players become even more powerful, their brand ever more exclusive.

The current state of trademark law also facilitates the phenomenon known as workplace fissuring.<sup>74</sup> When companies can control their brand but outsource their labor requirements to other companies, the economic firm becomes fissured into a cluster of separate entities. Many companies now outsource crucial parts of their core businesses to either other firms or independent contractors rather than keeping their business in-house. They can split off these workers due to the relaxation of the legal category of “employee,” as well as the growth of connected contracts and electronic surveillance.<sup>75</sup> But critical to this whole dynamic—and largely unappreciated by legal scholars—is the ability of the corporation to maintain its trademark over its business, despite the shedding of legal responsibility. As David Weil has put it:

[W]e assume that the companies who invest millions of dollars to convince us of the benefits of buying products under their retail nameplate or to purchase the unique services they offer also undertake the operations needed to produce them—including acting as the employer of all the interconnected people who make their businesses possible. Those assumptions are increasingly wrong.<sup>76</sup>

Trademark’s tolerance of fissuring can lead to fairly absurd results. Hotel housekeepers make beds and clean rooms but work for third-party

---

that it manages brands at all. Instead, trademark law champions corporations as the sole custodians of trademark meaning.”).

73. See generally Orly Lobel, *Gentlemen Prefer Bonds: How Employers Fix the Talent Market*, 59 SANTA CLARA L. REV. 663 (2020) (describing a broad landscape of anti-competitive restrictions that are routinely placed on employees); Burk & McDonnell, *supra* note 44, at 376 (describing the interaction of trademark with trade secrets and covenants not to compete).

74. See DAVID WEIL, *THE FISSURED WORKPLACE* 4–5 (2014); Cynthia Estlund, *What Should We Do After Work? Automation and Employment Law*, 128 YALE L.J. 254, 283 (2018) (“‘Fissuring’ is the now-prevalent term, coined by David Weil, for the migration of many jobs away from the profitable branded corporations that reign at the top of the economy.”).

75. Estlund, *supra* note 74, at 286 (noting that technology “enables lead firms to disintegrate products and processes into component parts, to set precise standards and specifications, and to monitor performance and outputs of lower-cost and remote outside suppliers”).

76. WEIL, *supra* note 74, at 3; see, e.g., James Brooke, *Factory Jobs Move Overseas as Japan’s Troubles Deepen*, N.Y. TIMES, Aug. 31, 2001, at A1 (quoting the chief economist for Merrill Lynch Japan, who referred to the “Nike model,” in which “you do the brand management in Seattle and the manufacturing in Indonesia”).

contractors.<sup>77</sup> Uber monitors its drivers and dictates their pay, but those drivers are considered entrepreneurs using the company's platform.<sup>78</sup> FedEx drivers deliver FedEx packages while wearing FedEx uniforms in trucks with FedEx signage, but the D.C. Circuit held them to be independent contractors.<sup>79</sup> Companies are now shedding workers and responsibilities to achieve their Platonic ideal—as pure repositories of intellectual property and nothing more. Big brands are heading towards a future where they no longer make things or even provide services—they would simply be forms on the walls of the cave.<sup>80</sup> Trademark's refusal to contemplate the mark's underlying identity has enabled this dissolution.

It is time for a different approach. One possible avenue would be a more vigorous inquiry into whether the underlying business still matches up with the original substance—the goodwill and consumer understanding—behind the mark.<sup>81</sup> The doctrines of assignment in gross and naked licensing could be reinvigorated to require more monitoring of the use of the mark.<sup>82</sup> And rather than simply assuming that whoever controls the business entity still operates the same business with the same goodwill, trademark decisionmakers could inquire into the substance behind the mark and the strength of competing claims to its use. If the underlying business differed significantly from the original business, the court could diminish or eliminate the rights to the mark, even in the absence of a change in the entity.

Alternatively, we could apply a more relaxed approach to trademark, one that allows a broader swath of people and entities to associate themselves with the mark.<sup>83</sup> Recognizing that a business is a complex organism that

77. WEIL, *supra* note 74, at 1.

78. V.B. Dubal, *Wage Slave or Entrepreneur?: Contesting the Dualism of Legal Worker Identities*, 105 CAL. L. REV. 65, 69, 101 (2017).

79. FedEx Home Delivery, Inc. v. Nat'l Labor Relations Bd., 563 F.3d 492, 504 (D.C. Cir. 2009); see also Jeffrey M. Hirsch, *Employee or Entrepreneur?*, 68 WASH. & LEE L. REV. 353, 367 (2011) (critiquing the D.C. Circuit's test).

80. June Carbone & Nancy Levit, *The Death of the Firm*, 101 MINN. L. REV. 963, 967 (2017) (“A brand such as ‘Natuzzi’ may signal a guarantee of quality, but its owners, employees, distribution networks, and even corporate headquarters can shift over time.”).

81. Sheff, *supra* note 13, at 812 (“The idea of trademark as promise would suggest that once consumers form certain expectations about the products to which a mark is affixed, the mark owner has an obligation to continue to provide products consistent with those it has offered in the past or else adequately disclose that it will no longer do so.”) (footnote omitted).

82. See Lemley, *supra* note 5, at 1710 (“Not only are assignments in gross unsupported by the traditional economic rationale for trademarks, but they do active damage to the goals of trademark law.”).

83. Cf. Keith Aoki, *Distributive and Syncretic Motives in Intellectual Property Law (with Special Reference to Coercion, Agency, and Development)*, 40 U.C. DAVIS L. REV. 717, 720 (2007) (arguing that “distributional considerations cannot be dealt with in a ‘one-size-fits-all’ procrustean IP framework”). For a comparable proposal in copyright, see Abraham Bell & Gideon Parchomovsky, *Copyright Trust*, 100 CORNELL L. REV. 1015, 1068 (2015) (proposing the use of a trust to allow a broader swath of contributors to participate in the value generated by the copyright).

morphs over time, the law could permit those who have participated in its creation or development to claim credit on some level.<sup>84</sup> A trademark could play more of a role as an avenue for communication, a reference to a brand allowing former employees, customers, critics, and fans to participate in the meaning and understanding of that brand.<sup>85</sup> And instead of forcing other parties to refrain from use, courts could allow significant common use up to the point of outright fraud as to source.<sup>86</sup>

Trademark law must recognize reality. Its purported purposes—to identify the source of goods and services, prevent consumer confusion, and foster the growth of goodwill—have given way to a property right that allows firms to leverage their brands widely and exclude all manner of players with legitimate associations. By replacing the idea of source identity with an organizational entity, trademark solved the messiness of policing the substance behind the mark. But in so doing, it also conceded the field to dominance by those who control the entities rather than those who participate in the underlying business.

#### CONCLUSION

In the *WandaVision* finale, the two Visions puzzled over their own identities with reference to the Ship of Theseus. What if the boards from the original ship were replaced over time, and a new ship created from the old one? Which is the true ship? In a moment of insight, one Vision answered: “Neither is the true ship. Both are the true ship.”<sup>87</sup>

When considering the application of trademarks, perhaps we should have a similar appreciation for this ambiguity, this liminal space. The Walt Disney Company is not the same thing as the company was seventy-five years ago, or even a year ago; people have come and gone, products and services have changed, and the underlying identity of the firm continues to

---

84. It has long been recognized that goodwill can come from a variety of sources and its nature may be somewhat capricious. See JOSEPH STORY, COMMENTARIES ON THE LAW OF PARTNERSHIP: AS A BRANCH OF COMMERCIAL AND MARITIME JURISPRUDENCE § 99 (1841) (noting that a firm may acquire goodwill “from constant or habitual customers, on account of its local position, or common celebrity, or reputation for skill or affluence, or punctuality, or from other accidental circumstances, or necessities, or even from ancient partialities, or prejudices”).

85. Cf. Desai, *supra* note 72, at 1037 (“Corporations, consumers, and communities all play large roles in providing information about a brand.”).

86. McKenna, *supra* note 12, at 1884 (defining trademark’s “relevant property interest . . . as the right to continue to enjoy the patronage of consumers attracted by labor, subject only to honest competition”). The protection for consumers could be expanded in other ways to meet changing relationships. See Alexandra J. Roberts, *False Influencing*, 109 GEO. L.J. 81, 83 (2020) (proposing claims under the Lanham Act for “false influencing” when companies disseminate deceptive claims via influencers).

87. *WandaVision*, *supra* note 4.

evolve. We assign a trademark to Disney as shorthand, a compromise, and a way of avoiding inevitable disputes over who really represents the Disney brand. But it is a compromise, a fiction—not reality. There is no “true” Disney—only a corporate entity whose owners, executives, workers, and property holdings have changed dramatically over time.<sup>88</sup> A recognition of this reality should give us pause as we consider who can use marks, for what reason, and to what legal ends.
